Let Us Brighten Your Day

Power outages can cause problems or damage to appliances and electronics when power is restored and surge of power goes through the home. Unplugging appliances and electronics when the power is out can help avoid this. Installing a Whole Home Surge protector can prevent damage from small surges throughout the year and protect your electronics and appliances.

If your smoke detectors continue to beep after the power is restored, replace the batteries first.

If you have parts of your home where the power has not been restored, try resetting your breakers and GFCI circuit.

Avoid opening fridges and freezers to keep food cold.

 **ALTERNATE POWER**
Have on hand batteries, Flashlights and Candles. Ensure gas powered generators are placed outside the home.

 **ELECTRONICS**
Unplug electronics to prevent damage from a surge when the power is restored. Whole home surge protection is a good way to protect your appliances and electronics year around.

 **COMMUNICATION**
Have a battery operated radio on hand to hear local updates. Know you local utility providers emergency numbers.
